# MULTIVISTA
CONSTRUCTION DOCUMENTATION™

e-Builder®

Multivista & e-Builder
Present
# Your Optimized Change Order Workflow

Gather all the information you require to accurately and efficiently document and review change orders with Multivista and e-Builder enabled processes. Access this information as needed with a few mouse clicks.
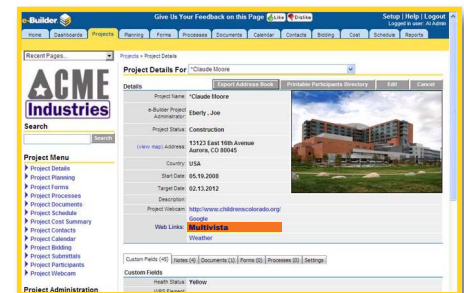

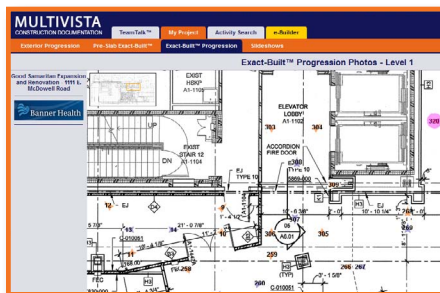

Generate

Generate: When a change order is generated in the e-Builder platform, you can streamline the process of capturing all the information you need to verify the origin, issuer, and other related info (e.g., Reason Code). You define what information must be included as specified in your contracts.

Verify

Verify: Since your e-Builder project is linked to your Multivista project documentation, Multivista provides you access to visually review the area impacted by the change order right from your desktop. If you need further verification in the field, you already know where to look.

Collaborate

Collaborate: With all the background information on hand, you can provide your teams with a more complete picture of the what, why, and potential cost impact.

Document

Already a client of both Multivista & e-Builder?
